

Xyli-Tots™ for Kids

Because your kids deserve to be cavity-free!

According to the CDC, dental caries is the #1 childhood disease, 5 times more prevalent than asthma, which is #2.

CariFree has a family of kids' products that make fighting early childhood caries safe and fun. These products are designed to promote healthy oral biofilm development for even your littlest ones.

Be proactive with your child's health from the beginning and prevent this disease.

All Xyli-Tots products contain:

- Xylitol, a natural sugar substitute that has been proven to lower decay rates. It is both safe and healthy to use.
- pH+ neutralizing technology to promote a healthy, non-acidic environment in your child's mouth.

CariFree®

Fight Tooth Decay the Easy Way™

New ways to prevent cavities before they start.

New understandings about the cause of cavities

Science shows that tooth decay and cavities are caused by a bacterial infection known as caries. The infection is driven by an acidic oral environment.

Keep a healthy smile while preventing cavities

CariFree employs pH+ technology to neutralize the decay-causing acids and treat the bacterial infection. This promotes long-term dental health as an alternative to simply treating signs and symptoms by filling cavities.

Your dental professional may perform a quick, painless one-minute screening to determine your risk for cavities. If harmful decay-causing bacteria are identified, a treatment plan may be recommended.

Additional new findings

Good oral hygiene isn't enough to stop cavities.

Even if you brush, floss, and visit your dentist regularly, harmful levels of the decay-causing bacteria may still be present.

A bacterial infection on your teeth can also be transmitted to others. Studies show that harmful decay-causing bacteria can be passed within the household, so it is important that all members of the family are tested and treated.

If the bacterial infection remains untreated, progressive stages of decay may result. Advanced decay can require treatments like crowns or root canals, or ultimately, the loss of teeth. The cost of prevention is low compared to the cost of treatment due to dental caries.

CariFree embraces new science.

The CariFree System utilizes the latest in research and technology to test for and treat dental caries.

CariScreen™ the easy 1-minute test

Your dental professional will conduct a questionnaire and a CariScreen test to determine your risk for cavities, based on your level of decay-causing bacteria.

LOW RISK ● 1 – 1500

AT RISK ● 1501 – 9999

Caries control solutions will be recommended based on your risk.

In order to perform the screening, **PLEASE DO NOT:**

- Brush, floss or rinse
- Smoke
- Eat or drink
- Chew gum

for at least 60 minutes prior to your appointment.

CariFree Solutions

Because you deserve to be cavity-free!

The CariFree products provide evidence-based solutions incorporating the most current research. Easy-to-follow instructions will make treating the caries infection and fighting cavities simple!

All CariFree products utilize:

- Patent-pending pH+ technology that neutralizes decay-causing acids
- Xylitol, a natural sugar substitute that has been proven to lower decay rates
- Formulations that relieve dry-mouth
- Great tasting flavors

New solutions for kids
